Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Potentially lower reward Lower risk				Potentially higher reward Higher risk		
1	2	3	4	5	6	7

The Fund is in Category 5 because of the high range and frequency of price movements (volatility) of the underlying investments referenced by the Fund.

The following are additional risks not covered by the risk and reward category.

- The level of income is not guaranteed.
- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency rates will reduce the value of your investment.
- Fixed interest stocks are the debts of governments and companies generally in the form of bonds. Bonds are affected by changes in interest rates, inflation and any decline in creditworthiness of the borrower (i.e. the bond issuer). Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may have difficulty in repaying their financial obligations.
- This Fund holds a limited number of investments. If one of these investments falls in value this can have a greater impact on the Fund's value than if it held a larger number of investments.
- The Fund may use derivatives that aim to remove the impact of changes in some exchange rates or market movement by hedging using a currency transaction or equity derivative which can protect against such movements. However, if exchange rates or equity prices move contrary to the Manager's expectations this can have a negative impact on the value of your investment.

For a full list of the Fund's risks, please see the prospectus.
